

FMP – Capital Asset Register

Capital Asset Register - Set Up

- The CAR function provides the following basic setup for preparation of asset management. It consists of:
 - Maintain Category
 - Maintain Asset Master
 - Maintain Analysis Code 1
 - Maintain Analysis Code 2
- Once all setup functions have been done, user can proceed to create vouchers, maintain Asset Registration, Write-Off and Transfer of assets.
- Please note that no year end closing concept applies to this module.

Capital Asset Register - Example

Capital Asset Register - Category

- An asset category is used to bundle a group of asset master records with similar nature. It facilitate asset registrations, report printing, enquiry and recording depreciation.

- Add Category

- By default, effective status of all newly created categories will be set to “Active”.
- No duplicated category record is allowed.

- Update Category

- User may change the description and effective status of the category.

- Delete Category

- User is not allowed to delete category, if any asset master record has registered under this category.
- Instead of deleting a category, user may consider setting the effective status of the category to “Inactive” if the category is no longer in use.

Capital Asset Register - Asset Master

- An asset code is an asset number which will be categorized under an asset category for asset management.
- i.e. Asset master = Category Code + Asset Code
- For Asset registration, Asset code must be filled in.
- Add Asset Master
 - User should create asset category before creating asset master records.
 - No duplicated asset code is allowed.
- Update Asset Master
 - User may change asset code information and effective status of the asset code.
- Delete Asset Master
 - Deletion of the asset code is not allowed if any Asset Registration with this asset code exists.
