

**Guideline  
of  
Applying Patch  
in  
HTTP Server  
of  
WebSAMS 3.0**

**Version 1.1**

**June 2019**

## Table of Content

Update Procedure .....	1
Troubleshoot 1 <i>starthsp: command not found</i> .....	T1-1
Troubleshoot 2 <i>ERROR 403: Forbidden</i> .....	T2-1

## Update Procedure

Please go through the following steps for applying update patch in HTTP Server of WebSAMS 3.0.

\*\*\* *If problem is encountered at any time, please refer to the sections of “Troubleshoot” for details of solutions.*

- 1) Log in HTTP server by using the “root” account.
- 2) Type the following command and press [Enter]:

```
starthsp
```

- 3) If the process is successful, the following message will be shown.

Please type “y” to reboot the HTTP Server in order to make the new setting effective.

```
*** The SSL Certificate is replaced successfully !!
*** Patch 20161101 is applied successfully!

*****
All patches have been applied!

*****

Please be reminded to input the PassPhrase for starting the Apache SSL service
after system reboot!

System will be rebooted!
Confirm? (y/n)
```

**\*\* Note\*\***

***Please be reminded:***

- *to input the PassPhrase for starting the Apache SSL service after system reboot!*
- *to perform backup of system configuration of HTTP Server after system reboot!*  
*(Please refer to Section 8 of “[Installation Guidelines for WebSAMS 3.0](#)” for detailed backup procedures.)*

**The process is completed.**

**\*\*\*\* Notice \*\*\*\***
